Professional Profile

Results-oriented Computer Science graduate with strong expertise in full-stack web development, software engineering, graphic design, and database design & management. Experienced in designing and building responsive websites, web applications, and digital products from concept to deployment, with robust back-end systems using modern technologies such as PHP, Python, JavaScript, Next.js, and React. Skilled at combining clean UI/UX design with solid technical implementation to deliver user-focused, high-performing digital solutions. Proven ability to manage projects independently, collaborate across teams, and turn ideas into functional, visually polished products.

Education

Bachelor of Science in Computer Science.

DMI-St John the Baptist University Lilongwe Campus.

Graduated 23 May 2025.

Relevant Experience and Expertise

- Experience in Cross-Platform Web Development.
- Experience in Database Development Management Systems and Data Modeling.
- Experience in Graphic Designing and Product Presentation.
- Experience in Public Speaking, Face-to-Face Interviews and Couching.
- Experience in Data Collection and Entry.

Technical Skills

Programming Languages:

JavaScript, TypeScript, Python, PHP, SQL, HTML, CSS, Bash.

Frameworks and Libraries:

Next.js, React.js, Node.js, Laravel, Flask, FastAPI, Django, TailwindCSS, Bootstrap.

Database and Systems:

MySQL, PostgreSQL, MongoDB, Git, GitHub, Vercel, Docker, Linux Ubuntu, Windows, macOS.

Other Tools:

Microsoft Office Suite, Figma, VS Code, WordPress, Google Analytics.

Work Experience

Web Developer / Graphic Designer.

Paxx Creatives.

Key Duties:

- Designing, creating marketing and print materials.
- Producing graphic visuals and branding materials.
- Designing and building websites/ landing pages from concept to finish.
- Maintaining and troubleshooting existing sites.

Research Assistant for BLOODSAFE and Peer EndLine Survey

University of North Carolina (UNC) Project, Lilongwe

Key Duties:

- Identified and consented eligible study participants in accordance to study protocol.

- Conducted interviews and collected data using paper based questionnaires and ODK software.
- Held focus group discussions with community leaders and provided technical support.
- Reviewed, managed and uploaded study data into electronic database (REDCAP).

Projects

Attendy – Geobased Attendance Tracking System

Tech Stack: PHP, JavaScript, HTML, CSS, MySQL

- Designed and developed a full-stack web application for organizational attendance tracking and management.
- Implemented geolocation-based verification using the browser Geolocation API and reverse geocoding to confirm users' physical presence within a defined radius.
- Built real-time attendance recording with timestamp logging, automated status updates and data validation.
- Developed admin and employee dashboards with filtering, search, and exportable reports.
- Secured the system with session-based authentication, password hashing, and role-based access control (admin, manager, employee).
- Optimized MySQL database schema for efficient querying of attendance records and location logs.

Youniq – Clothing / E-commerce Website for Brand

Tech Stack: Next.js, TailwindCSS, MongoDB, Vercel

- Developed a fully responsive e-commerce platform with product catalog, detailed product pages, shopping cart, and order placement flow.
- Built dynamic product filtering, search, and category navigation using React state management and server-side rendering in Next.js.
- Integrated MongoDB for product, user, and order data storage, with API routes handling CRUD operations.
- Implemented cart persistence, quantity management, and order summary calculation on both client and server side.
- Deployed the application on Vercel with optimized image handling, fast page loads, and mobile-first TailwindCSS styling.
- Focused on clean UI/UX, smooth transitions, and consistent branding throughout the shopping experience.

Inventory Management System

Tech Stack: PHP, JavaScript, HTML, CSS, MySQL

- Designed and built a web-based inventory management system for tracking stock levels, product details, and supply movements.
- Developed modules for adding/editing products, recording stock in/out transactions, and generating low-stock alerts.
- Implemented real-time inventory updates and searchable product tables with pagination.
- Created role-based dashboards for admins and staff, including transaction history and inventory valuation reports.
- Secured the application with user authentication, input validation, and prepared SQL statements to prevent injection.

- Structured the MySQL database for efficient relational data handling between products, categories, suppliers, and transactions.

Custom Landing Pages

Tech Stack: Next.js, React.js, TailwindCSS, Vercel

- Designed and developed multiple high-converting, fully responsive landing pages for marketing campaigns and product launches.
- Built reusable React components for hero sections, feature grids, testimonials, pricing tables, and call-to-action blocks.
- Implemented smooth scroll animations, form handling, and basic lead capture functionality.
- Optimized for performance (fast load times, Core Web Vitals) and SEO with semantic HTML, meta tags, and clean URLs.
- Used TailwindCSS for rapid, consistent styling and deployed each page on Vercel for instant global delivery.
- Focused on strong visual hierarchy, mobile-first design, and clear conversion-oriented user flows.
